

# National Security and Investment Bill: a new frontier for scrutiny of investment in the UK: overview

## The impact on energy and infrastructure

On 11 November the UK Government published its ground-breaking **National Security and Investment Bill (Bill)**. The Bill will drastically expand the Government's powers to scrutinise investment on national security grounds, and will require advance notification and clearance of many transactions in the energy and infrastructure sectors. The far-reaching scope of the new regime and the resulting administrative burden and transaction risk will inevitably have a significant impact on acquirers looking to invest in the UK in these sectors.

Key features of the new regime are:

- **Mandatory notification:** transactions involving targets in 17 identified “sensitive” sectors will require UK Government approval prior to closing otherwise they will be void. The acquirer must submit notification. These include key energy and infrastructure sectors. Points to note:
  - **sensitive sectors:** civil nuclear, communications, defence, data infrastructure, energy, transport, AI, autonomous robotics, computing hardware, cryptographic authentication, advanced materials, quantum technologies, engineering biology, military or dual-use technologies, satellite and space technologies and critical suppliers to the Government and emergency services. Precise definitions for the sectors/types of sector entity that could fall within the mandatory regime remain to be finalised: consultation is ongoing until 6 January 2021.
  - **scope of obligation:** from an energy/infrastructure investment perspective, it appears the Government intends very wide-ranging notification obligations in the civil nuclear, energy, data infrastructure and communications sectors (excluding TV / radio content services). More targeted obligations seem intended in the transport sector, focusing on major ports, airports and air traffic control (as opposed to road and rail where public sector ownership/controls are already in place). The consultation envisages that water companies will not be included within the mandatory regime (potentially as already subject to Ofwat scrutiny), but – assuming that position is maintained when the regime comes into force - we expect the Government to look very closely at whether its new call-in powers might apply to any significant transactions in the water sector.
  - **applicable transactions:** these are acquisitions of 15% or more of the votes/shares in a target (note that this threshold was removed from the final Act – see our **update alert**); or an increase in a holding of votes/shares to more than 25%, more than 50% or to 75% or above; or which allow the acquirer to enable or prevent passage of any class of resolution governing the affairs of the target. Further clarity would be welcome on the application of the rules to changes in the structure / investor make-up of funds investing in these sensitive sectors (eg limited partnerships) and as regards the interpretation of certain provisions, for example relating to common interest and joint arrangements in the context of energy and infrastructure structures.

- **loans and security:** providing loans to entities in these sectors is not intended to require notification, but enforcement of share security is likely to require mandatory notification. Although the Government expects to intervene rarely in loans, namely when an actual acquisition of control is taking place, lenders will need to assess upfront, as well as prior to enforcement, the implications of the regime for their security package. The timeframe for enforcement may be impacted, and an intervention may result in unexpected remedies, with the make-up of the lender group potentially being critical to the outcome. The impact of the new regime may affect the availability of certain funding sources.
  - **asset acquisitions:** these will not require notification, but may fall within the scope of the voluntary regime.
- **‘Call-in’ power and voluntary notifications** for an extremely wide range of transactions across all sectors of the economy. Notification may be submitted by the acquirer, the seller or the relevant entity. Points to note:
- **scope:** includes minority acquisitions, mere asset acquisitions, IP licences, loans, conditional acquisitions, future and options. While the Government only expects intervention when an actual acquisition of control will take place (eg when a lender seizes collateral), parties will need to consider both upfront and at the time of the relevant acquisition how the regime may impact relevant arrangements, particularly in the sensitive sectors.
  - **financing arrangements:** parties may need to consider whether financing arrangements, combined with the make-up of (and changes to) the lender group, could be a trigger event outside the security enforcement context. This will depend on the scope of the lenders’ control/influence over their borrower or its assets, with the nature of the borrower’s activities influencing the risk of any potential trigger event being called in. This may need particular consideration in projects in the sensitive energy and infrastructure sectors.
  - **asset acquisitions:** if the assets are closely related to “core activities” (primarily within the sensitive areas) acquisitions are more likely to be called in. This is particularly relevant in relation to energy and infrastructure assets.
- In a departure from the UK’s existing national security regime, for both mandatory notification and the call-in power there are no turnover or market share thresholds (the target need only carry on activities or supply customers in the UK).
  - Call in for events occurring after commencement: Once the Government becomes aware of a trigger event it will have six months to call it in, subject to an overall five year limitation period from the trigger event occurring.
  - Call in for events occurring before commencement: The call-in power will apply retrospectively to any relevant transaction that has not completed before 12 November 2020, subject to an overall five-year limitation period from the date of commencement of the relevant part of the Act. This period is reduced to six months from commencement where the Government has been made aware of the relevant transaction prior to that date. After commencement, once the Government becomes aware of a trigger event in that period, it will have six months to call it in (in line with events occurring after commencement).

Although this retrospective call-in power cannot be exercised until the Bill has been enacted the parties may need to consider whether to engage with the Government to understand the risk of a retrospective call-in from that date and to benefit from the reduced call-in period. In this context the Government has said that it welcomes informal representations about transactions which could be in scope of the new regime and that it “may” provide advice to assist in business planning. It also does not expect many transactions to be affected by this retrospective call-in power.

- On implementation of the new regime, notifications will be made via an online portal to a new **Investment Security Unit**, which will sit within the Department for Business, Energy and Industrial Strategy (**BEIS**). The review form is intended to be short (three or four pages), but the information to be provided is not yet clear, pending publication of notification regulations – for example, how much information will be required on non-controlling financial interests (such as in limited partnership energy and infrastructure funds). The ultimate decision-maker will be the Secretary of State for BEIS. Decisions will be challengeable on judicial review grounds. The Secretary of State will have a maximum of 30 working days to decide whether to clear a transaction or to call it in for a more detailed review. If the Secretary of State reasonably suspects a risk to national security, BEIS will conduct a detailed review lasting a further 30 working days (with up to an additional 45 working days, or more if a ‘voluntary period’ is agreed with the acquirer).
- As is the case under the existing UK national security regime, the Government will be able to impose **remedies** and even **prohibit** transactions. It will also have the power to impose **interim orders** to halt or reverse any integration and, in anticipated transactions, to order that completion does not take place.
- The Bill sets out civil and criminal **sanctions** for non-compliance with the regime. Fines of up to 5% of global turnover or £10 million (whichever is greater) can be imposed on acquirers. Individuals face imprisonment of up to five years. And transactions subject to the mandatory notification requirement will be void if they take place without clearance.
- A transaction may undergo **parallel reviews** in the UK – on both competition grounds (by the CMA) and national security grounds (by the Government). The Bill gives the Secretary of State the power to direct the CMA to take, or not take, action under the merger control regime in relation to the transaction. This effectively means that the national security issues can ‘trump’ competition concerns.

The **Impact Assessment** for the Bill estimates up to an enormous 2,200 ‘early engagements’ with government, resulting in 1,000-1,830 notifications each year. Of these, it expects 70-95 ‘call-ins’ for a detailed review, and around 10 remedies decisions. It remains to be seen how accurate these predictions are and if the resources allocated to the new screening regime will be sufficient to cope with actual numbers.

**Impact on new energy and infrastructure projects:** We would expect the procurement process for new public projects in the sensitive sectors to address national security concerns at the award stage, but it is not entirely clear how this will tie in with the new legislation. The Act will certainly apply subsequently in the acquisition and disposal of such assets (as part of or overlaying any contractual change in control provisions).

**In summary:** Energy and infrastructure sectors are at the heart of the proposed legislation. Market participants in both private and Government-procured energy and infrastructure transactions need to be aware of all relevant implications when contemplating transactions and financing arrangements from 12 November 2020 onwards – and anticipate notification requirements and possible call-in.

We are closely tracking progress of the Bill and will be providing further updates on developments.

Please get in touch with your usual Allen & Overy contact if you would like to discuss the implications of the new regime for your business.

**GLOBAL PRESENCE**

---

Allen & Overy is an international legal practice with approximately 5,500 people, including some 550 partners, working in more than 40 offices worldwide. Allen & Overy LLP or an affiliated undertaking has an office in each of:

Abu Dhabi	Budapest	Istanbul	New York	Sydney
Amsterdam	Casablanca	Jakarta (associated office)	Paris	Tokyo
Antwerp	Dubai	Johannesburg	Perth	Warsaw
Bangkok	Düsseldorf	London	Prague	Washington, D.C.
Barcelona	Frankfurt	Luxembourg	Rome	Yangon
Beijing	Hamburg	Madrid	São Paulo	
Belfast	Hanoi	Milan	Seoul	
Bratislava	Ho Chi Minh City	Moscow	Shanghai	
Brussels	Hong Kong	Munich	Singapore	

**Allen & Overy** means Allen & Overy LLP and/or its affiliated undertakings. Allen & Overy LLP is a limited liability partnership registered in England and Wales with registered number OC306763. Allen & Overy (Holdings) Limited is a limited company registered in England and Wales with registered number 07462870. Allen & Overy LLP and Allen & Overy (Holdings) Limited are authorised and regulated by the Solicitors Regulation Authority of England and Wales.

The term **partner** is used to refer to a member of Allen & Overy LLP or a director of Allen & Overy (Holdings) Limited or, in either case, an employee or consultant with equivalent standing and qualifications or an individual with equivalent status in one of Allen & Overy LLP's affiliated undertakings. A list of the members of Allen & Overy LLP and of the non-members who are designated as partners, and a list of the directors of Allen & Overy (Holdings) Limited, is open to inspection at our registered office at One Bishops Square, London E1 6AD.
